# Collection Status & Recovery Benchmark

Where the placed accounts stand, why recovery looks the way it does at this stage, and the two decisions that will most change results across all sixteen Series entities.

**17**

Client accounts set up (parent + 16 Series)

**4**

Series entities that have placed accounts

**\$84,760.22**

Placed across 4 accounts

**\$0.00**

Collected to date (accounts are 69–76 days on desk)

**33 mo**

Dollar-weighted age of balances at placement

**10¢**

Industry-expected collectability per dollar at the age these were placed

## 1. Summary

Portico's relationship with Southwest Recovery Services is ten weeks old at the account level. Four Series entities have placed four former-tenant balances totaling \$84,760.22. Nothing has been collected yet. That outcome is consistent with two facts about the portfolio, both of which are shared, fixable levers rather than a verdict on the accounts.

### What has happened

All four accounts received the full SWRS front-end: skip-trace and address refresh at intake, Regulation F validation notices, a four-letter demand series, 20 email touches, 14 dialer attempts, credit-bureau reporting, and a live agent conversation on one account. One account is held to credit-reporting only because it arrived outside the limitations period.

### What is holding recovery back

The balances were 20 to 47 months past their date of receipt when placed — a dollar-weighted **33 months**. The industry collectability curve puts realistic recovery on paper of that age at roughly **10 cents on the dollar**, versus ~69 cents at 90 days. Contact data on former tenants decays fastest of any debtor type, and the files arrived without phone, email, or forwarding-address data.

## The bigger opportunity

**Twelve of the sixteen Series entities have never placed an account.** If those entities hold move-out balances, every month they sit unplaced costs roughly 10 to 15 points of recoverable value. A standing placement trigger — tied to the DC 45-day security-deposit accounting — is the single change most likely to move Portico's blended recovery from the low single digits toward the 40–60% band that fresh receivables reach.

## 2. Entity roster

All seventeen client records were opened in three waves (May 11, June 29, and August 14, 2026) with the same contact and portal configuration. The parent record is a billing/reporting anchor; placements belong to the Series entity that holds the lease.

| Client # | Entity                                                  | Onboarded    | Accounts | Placed \$   | Status                                      |
|----------|---------------------------------------------------------|--------------|----------|-------------|---------------------------------------------|
| 11758    | Portico Investments – Portico Investments, LLC (parent) | May 11, 2026 | —        | —           | Parent / billing                            |

#### **Series 4, LLC · 12 Galveston St SW, Unit 302**

Four-letter demand series complete; validation notice delivered by email; eight dialer attempts to the verified cell (voicemail/no answer); seven email touches including two convenience-settlement offers and a credit-reporting notice. No right-party contact yet.

Documents received: Lease package, final ledger (02/03/2025), collections worksheet.

#### **Series A2, LLC · 2215 Hunter Pl SE, #104**

Four-letter demand series complete; validation notice delivered by email. Live call connected on 08/07 (message left, payment link emailed the same minute). Credit report pulled: eight derogatory tradelines, no open credit — a stretched consumer, so resolution likely requires a structured settlement.

Documents received: Lease agreement, final ledger (06/03/2025), collections worksheet.

#### **Series D2, LLC · 3105 Naylor Rd SE, #101**

Four-letter demand series complete; validation notice to primary and Reg F notice generated to the co-obligor. Credit reports pulled on both signers: no open credit, nine derogatory tradelines. Dialer attempts to three numbers, no answer. This account reaches the three-year statutory mark on 09/30/2026 based on the DOR on file — decision point below.

Documents received: Lease (two signers), final ledger (10/20/2024), collections worksheet.

### Series P1, LLC • 1300 Congress St SE, Unit 10

Received more than three years after the date of receipt on file, so the account is outside the District of Columbia limitations period for a contract action. Active demand was suspended by policy; the tradeline is reported to the bureaus, which remains the lawful lever on a time-barred balance. Any payment activity would be voluntary.

Documents received: Lease, detailed ledger (06/15/2024), collections worksheet.

#### Reading the activity honestly

Effort has been consistent and compliant, and every account has verified numbers on file thanks to intake skip-tracing. The constraint is not volume of attempts — it is that former tenants two to four years removed from the lease rarely answer an unknown number, and the credit profiles pulled show no open credit to protect. On files like these, recovery typically comes from the bureau tradeline (a tenant applying for new housing or credit) or a negotiated settlement, not from the demand series alone.

## 5. Age at placement against the industry curve

Collectability decays from the moment a balance goes delinquent, not from the moment it is placed. The Commercial Collection Agencies of America curve — the most widely cited industry reference — is plotted below with each Portico account marked at its own age when it reached SWRS.

| Account         | Age at placement | Curve collectability | Placed      | Expected collectable |
|-----------------|------------------|----------------------|-------------|----------------------|
| Series 4, LLC   | 24 mo            | 9.1%                 | \$24,014.01 | \$2,175              |
| Series A2, LLC  | 20 mo            | 13.0%                | \$11,765.88 | \$1,524              |
| Series D2, LLC  | 33 mo            | 8.9%                 | \$22,285.00 | \$1,983              |
| Dollar-weighted | 33 mo            | 9.5%                 | \$84,760.22 | \$8,059              |

| Account         | Age at placement | Curve collectability | Placed      | Expected collectable |
|-----------------|------------------|----------------------|-------------|----------------------|
| Series P1, LLC  | 47 mo            | 8.9%                 | \$26,695.33 | \$2,376              |
| Dollar-weighted | 33 mo            | 9.5%                 | \$84,760.22 | \$8,059              |

The lease packages show why the gap is wider than the DOR alone suggests: final ledgers were prepared between June 2024 and June 2025, yet the accounts reached SWRS in late June and early July 2026 — 12 to 24 months after Portico had already finalized what was owed. That interval is where forwarding addresses, phones, and the tenant's own memory of the balance were lost.

## 6. Limitations runway

The District of Columbia allows three years to bring an action on a lease or other contract (D.C. Code § 12-301). SWRS does not sue or threaten suit on time-barred balances; those accounts move to credit-reporting-only treatment, which remains lawful and is often what ultimately prompts payment. The dates below run from the date of receipt on file and should be confirmed against the actual breach or last-payment date in Portico's ledgers.

| Account                                            | Date of receipt | Three-year mark         | Implication                                                    |
|----------------------------------------------------|-----------------|-------------------------|----------------------------------------------------------------|
| Series 4, LLC<br>L. Bridges                        | Jul 11, 2024    | Jul 11, 2027 (300 days) | Open — evaluate legal referral if no resolution by day 120     |
| Series A2, LLC<br>C. Flowers                       | Nov 1, 2024     | Nov 1, 2027 (413 days)  | Open — evaluate legal referral if no resolution by day 120     |
| Series D2, LLC<br>M. Banks (co-obligor J. Downing) | Sep 30, 2023    | 16 days — Sep 30, 2026  | Decide on legal referral <b>now</b> — window closes this month |
| Series P1, LLC<br>D. Benbow                        | Aug 1, 2022     | Expired Aug 1, 2025     | Suit not available; credit reporting continues                 |

### Decision this month: Series D2 (3105 Naylor Rd)

The Banks/Downing balance of \$22,285.00 reaches the three-year mark on September 30, 2026 based on the DOR on file. If Portico wants a judgment option preserved, a legal referral decision is needed before that date; otherwise the account continues on demand and credit reporting. Two signers with verified phones make this the strongest legal candidate in the batch.

## 7. Peer benchmark — SWRS property-management book

SWRS classifies its client book by industry. The property-management segment is 199 clients, 5,030 open accounts, and \$30.8 million in open balance, with an average balance of \$6,133 — larger than most consumer paper and worked in the senior-collector / negotiated-settlement tier. Portico's four accounts average \$21,190, well above the segment norm, which is why they carry named-collector treatment.

| Measure                | SWRS property-management segment | Portico (4 accounts) |
|------------------------|----------------------------------|----------------------|
| Average balance placed | \$6,133                          | \$21,190             |

| Measure                                                                           | SWRS property-management segment | Portico (4 accounts) |
|-----------------------------------------------------------------------------------|----------------------------------|----------------------|
| Recovery in first 30 days after placement<br>(segment history, 2022–2023 cohorts) | 0.95%                            | 0.00%                |
| Share of two-year recovery that arrives in the first 90 days (all segments)       | 62%                              | —                    |
| Share of two-year recovery that arrives in the first year (all segments)          | ~90%                             | —                    |

Two points follow. First, property management is the second-slowest-starting segment in the SWRS book, because debtors are former tenants whose contact data is already stale on arrival — so a zero after ten weeks on aged paper is not an outlier. Second, across every segment the majority of what will ever be recovered arrives in the first 90 days after placement. The work that moves results is therefore done *before* placement: placing sooner, and placing with contact data.

## 8. What earlier placement is worth

Holding the placed dollars constant, the table applies the industry curve at different placement ages. These are expected-collectability figures for paper of that age, not a guarantee for these four tenants.

| Placement timing                                      | Curve collectability | Expected collectable on \$84,760 |
|-------------------------------------------------------|----------------------|----------------------------------|
| Placed at 90 days past due                            | 68.9%                | \$58,400                         |
| Placed at 6 months                                    | 51.3%                | \$43,482                         |
| Placed at 12 months                                   | 21.4%                | \$18,139                         |
| Actual — dollar-weighted age at placement (33 months) | 9.5%                 | \$8,059                          |

### Translation

Had the same four balances reached SWRS at 90 days past due, roughly **\$58,400** would have been realistically collectable rather than **\$8,059** — a difference of about **\$50,341** on four accounts. Applied across sixteen entities with normal turnover, that is the size of the lever a placement trigger controls.

## 9. Placement-file findings

Every placement arrived with a lease, a final ledger, and a collections worksheet — good documentation for validation and credit reporting. What was missing is the data that drives right-party contact.

| Data element         | Status on the four files                                          | Why it matters                                                                                                            |
|----------------------|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Tenant phone numbers | <b>Not supplied</b> — all numbers were located by SWRS skip-trace | Industry right-party-contact averages about 26%; verified phones from the rental application are the single biggest lift. |
| Tenant email         | <b>Not supplied</b> — located by SWRS                             | Email carries validation notices and settlement offers at near-zero cost and is the preferred channel for many tenants.   |

| Data element                 | Status on the four files                                                          | Why it matters                                                                                                         |
|------------------------------|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Forwarding / current address | <b>Not supplied</b> ; the placed ZIP fields failed mail validation on three files | Move-out forwarding addresses (from deposit-return correspondence) are the freshest address a landlord holds.          |
| Date of birth / SSN          | <b>Not supplied</b>                                                               | Required for accurate credit-bureau matching and skip-trace; both are on the rental application Portico already holds. |
| Co-tenant / guarantor        | <b>Supplied on 1 of 4</b> (Series D2)                                             | A second obligor roughly doubles the chance of a reachable, creditworthy party.                                        |
| Lease, ledger, worksheet     | <b>Supplied on 4 of 4</b>                                                         | Supports validation, itemization, and bureau reporting — no gaps.                                                      |

The rental application and move-out file already contain most of this. Including them with each placement turns a skip-trace exercise into a direct-contact exercise on day one.

## 10. Recommendations and decisions for the meeting

### For Portico

1. **Adopt a placement trigger for all sixteen Series entities.** Place every move-out balance at day 60 after move-out — after the 45-day DC security-deposit accounting closes, while the forwarding address is still current and the balance is fresh. Balances placed inside 90 days sit near the top of the collectability curve.
2. **Sweep the twelve entities that have not yet placed.** Any existing move-out balance is losing 10–15 points of recoverable value per month unplaced; the ones under 12 months old are still worth well over half their face value on the curve.
3. **Send the rental application and move-out file with each placement.** Phones, email, DOB/SSN, employer, emergency contact, co-signer, and forwarding address. The SWRS portal accepts these as attachments alongside the lease and ledger.
4. **Grant settlement authority on the four current accounts.** With no open credit on the tenant profiles pulled, structured settlements are the realistic path; pre-approved authority lets SWRS close when a tenant does engage.
5. **Decide on legal referral for Series D2 before September 30.** See section 6.

### What SWRS will do

1. Continue credit-bureau reporting on all four accounts and re-skip-trace at 90 and 180 days on desk.
2. Move Series 4 and A2 to the settlement-offer track immediately upon authority; re-attempt the Series A2 live-contact number weekly.
3. Prepare a litigation-viability assessment on Series D2 on request.
4. Provide a 30-day onboarding checklist and portal walkthrough for the twelve entities that have not placed, and a monthly status report covering all sixteen entities.

## 11. Industry research & benchmark index

### Commercial Collection Agencies of America (CCA of A) — 7-point curve

|           |       |
|-----------|-------|
| 1 month   | 88.7% |
| 3 months  | 68.9% |
| 6 months  | 51.3% |
| 9 months  | 37.5% |
| 12 months | 21.4% |
| 18 months | 15.2% |
| 24 months | 8.9%  |

Commercial Collection Agencies of America, published in the Credit Research Foundation's "Benchmarking the Collectability of Your Accounts Receivable" (Nancy Seiverd).

### Commercial Collection Agency Association (CCAA) — 8-point curve

|             |       |
|-------------|-------|
| Due date    | 94.9% |
| 30 days     | 89.9% |
| 60 days     | 81.3% |
| 90 days     | 69.6% |
| Six months  | 52.1% |
| Nine months | 39.1% |
| One year    | 22.8% |
| Two years   | 9.3%  |

Commercial Collection Agency Association, reproduced in a Frank, Frank, Goldstein & Nager, PC presentation ("Protect Your Bottom Line").

### Age at placement

- An account is roughly **200% (3×) more likely to be collected if assigned at 90 days versus 360 days** (Leib Solutions, citing the standard commercial receivables aging curve).
- Roughly **10–15 percentage points of recovery probability are lost per additional 30 days** unworked (MSB Bureau, citing CLLA + ACA International); likelihood of write-off rises ~1% per week past due (Kaplan Group / CLLA).
- Fresh vs. aged proof: one agency reports a **40% liquidation rate in the first 90 days while a competitor reached only 12–13%** on the same account type (AFM). MSB reports 40–60% recovery on B2B accounts placed within 90 days, versus rarely above 10–15% on debts over two years old.
- "The time for outside, third-party collection agency action is when the debt may still be collectible, best from 90–120 days past due. Waiting too long is to invite a total write-off" (Leib Solutions).

### Right-party contact

- Reaching the right party is the binding constraint — "message quality and payment options are irrelevant if nothing lands" (HL Hunt). Recovery requires a valid contact point → a delivered message → a person who reads it → a payment; the funnel fails most often at step one.
- The industry-average **right-party-contact (RPC) rate is approximately 26%**, and roughly 23% of contact centers sit below 20% — meaning about 3 of 4 outbound calls never reach the person who can resolve the debt (DROS.ai; Datacultr). Traditional outbound dialing yields only 4–8% RPC per attempt (Anyreach).
- Stale/missing data is a leading cause: **up to 40–50% of contact data can become outdated within 18 months** (NCRI). In one field audit ~18% of numbers were disconnected or wrong (DROS.ai). ACA International member surveys found 62% saw decreased RPCs, 78% experienced call-blocking, 74% had calls mislabeled (TrueAccord).

- Value of accurate data at placement: better contact enrichment / skip tracing directly lifts RPC and recovery. Skip tracing is "particularly effective for aged debt" and turns otherwise-written-off accounts into recoverable revenue (firstcreditonline.com; commercialcollectors.com).

### Why balances become uncollectable

|                                                         |                                                                                                                                                                                                |
|---------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Debtors relocate / go dark</b>                       | Contact information goes stale — up to 40–50% within 18 months.                                                                                                                                |
| <b>Businesses close, dissolve, or file bankruptcy</b>   | 53% of North American firms expected insolvency risk to increase in 2025 (Atradius 2025 Payment Practices Barometer).                                                                          |
| <b>Memory of the debt fades / legitimacy questioned</b> | Debtors forget services rendered and dispute whether the debt is valid (Credit Iowa; MetCredit).                                                                                               |
| <b>Other creditors get paid first</b>                   | "A client who's struggling financially and has only enough money to pay one creditor will likely pay the one who makes the most fuss" (Nolo) — the basis for "the first agency to place wins." |
| <b>Assets dissipate; time-value erodes</b>              | Every uncollected dollar loses present value while collection cost rises; contingency rates climb with age (15–25% fresh, 40–50% at 24 months-plus) (Retrievables).                            |
| <b>Statute of limitations</b>                           | Commercial debts typically run 3–6 years by state (4 years in Texas); legal collectibility and practical collectibility are different measures (JSD).                                          |

## 12. Sources and methodology notes

### Data

- Client records, placements, balances, and work logs are drawn from the SWRS collection system of record as of Sep 14, 2026; balances reconcile to the Account Summary by Manager export of the same date.
- Age at placement = date placed minus date of receipt on the account. Expected collectability applies the CCA of A seven-point curve with linear interpolation, dollar-weighted by original balance.
- Peer figures are SWRS's own property-management segment measured on 2022–2023 placements to fixed windows; they are historical outcomes, not predictions. Segment assignments are inferred from client name.
- Limitations dates are computed from the date of receipt on file under D.C. Code § 12-301 (three years, contract) and must be confirmed against actual breach or last-payment dates. This report is not legal advice.

## Caveats

- Two decay-curve datasets exist and are not identical (the 94.9%→9.3% eight-point CCAA curve vs. the 88.7%→8.9% seven-point CCA of A curve). They are shown separately, not averaged. The 18-month = 15.2% point in the CCA of A series is a published anomaly reproduced faithfully.
- The classic CCA of A / CCAA / CLLA curve is a long-standing, periodically-updated industry convention; the exact vintage of the published percentages is not always stated. It is the most widely-cited industry standard.
- Recovery-rate bands (20–30% overall; 30–70% B2B; 40–60% fresh commercial) are ranges, not guarantees, and vary by documentation quality, debtor solvency, balance, vertical, and macro conditions. Some fresh-vs-aged figures are self-reported agency benchmarks.
- RPC / skip-trace statistics come largely from collections-technology and agency vendors and reflect blended (mostly consumer) portfolios; the underlying principle — stale/missing data kills recovery — applies to both consumer and B2B.
- Commercial collections operate outside the FDCPA, which governs only consumer debt.
